If you've got unimpaired delta outflow vs actual delta outflow, you would make me a happy man as I get ready to go on vacation.

broken down by sac and SJ would be icing on teh cake -- net needed at the moment, but lovely to have easily accessible.

I owe you both, thanks

Bruce

There used to be a commercial for a bread called "Beefsteak Rye". In the commercial they asked a New York Deli owner what he thought about this bread and he said, "meh, it's ok". Then the announcer says: "From a Deli Owner, that's a RAVE!".

So, it was in that spirit that I took your critique of the use of canned-background in my slides... if that's the extent of the critique, I'll consider they presentation a success ;-) Thanks!

re: Unimpaired flows. Which ones do you want? Delta outflow? Sac inflow? San Joaquin inflow? On the latter, we've put in quite a bit of work recently trying to estimate daily Vernalis flows in order to estimate the impact to pulse duration of different potential SWRCB prescriptions... Let me know, or rather, let Igor know specifically what you are looking for and we can either direct you to it on the web or, if we have it in a form that will be useful, send it to you as an excel file.

Igor--please share with Bruce any data that he requests and give him enough background on any processing we did so that he understands what he's got.

Thanks,
JR

First off, I wanted to say that I thought your focus on BDCP really minimized the overlap and that you did a very good job doing that -- and I want to apologize for leaping to critique without recognizing the quality of your presentation. And next time let's DO coordinate, especially on such ridiculously short presentations.

Secondly, I was wondering if you have the unimpaired flows in an easy to use format -- I have never had occasion to use them and now feel a desperate need before flying off on vacation. If so, thanks, If not, thanks anyway.
